via HYALURONIC ACID Fillers:

Restylane® Products: Silk, Lyft, Restylane, Refyne, Defyne

Juvederm® Collection: Volbella, Juvederm Ultra, Ultra Plus, Vollure, Voluma

Belotero Injectable Gel

via CALCIUM Hydroxylapatite Fillers:

Radiesse®

'Fill Beautiful' denotes 5 Star Medical providers' use of various dermal fillers to add volume to different areas of the face via a hyaluronic acid gel or calcium hydroxylapatite (CaHA) microspheres suspended in an aqueous gel carrier. Hyaluronic acid gel fillers are sterile, clear, and colorless. Radiesse is sterile, white, and radiopaque. Client may experience pain and a burning sensation during injections. Results last approximately 6 to 12 months and thicker fillers may last longer, possibly 18 months to 2 years.

RISKS & COMPLICATIONS

Bleeding and bruising: I understand that there is a risk of bruising, redness, swelling, and itching associated with the procedure. These symptoms are usually mild and last less than a week but can last longer. Clients who are using medications that can prolong bleeding, such as blood thinners and anticoagulants (aspirin, warfarin), anti-inflammatories (ibuprofen, naproxen, Excedrin) or megadoses of vitamin E and supplements (fish oil, ginger, garlic, ginseng, ginko baloba) may experience increased bruising or bleeding around the injection site. Please stop taking these for about two weeks, however, first consult your primary physician when stopping essential prescribed medications. Avoid drinking alcohol on the day of injection. Some clients purchase oral or topical arnica to reduce bruising.

Nodules, and palpable material: I understand that there is a risk that small lumps may form under my skin due to the Fill Beautiful Products collecting in one area. I also understand that I may be able to feel Fill Beautiful Products in the area where the material has been injected. Any foreign material injected into the body may create the possibility of swelling or other local reactions to a filler material. Material may be palpated immediately or form after weeks or months.

Migration: I understand that the dermal filler material may move from the place where it was injected.

Infection: As with all transcutaneous procedures, I understand that injection of any filler material carries the risk of infection. Taking a dose of prophylactic antiviral medication may reduce the risk of oral/lip outbreak in clients with previous active/dormant herpes.

Allergic Reactions: I understand that Fill Beautiful Products should not be used in clients with severe allergies, a history of anaphylaxis, or history or presence of multiple severe allergies or hypersensitivity to any of the ingredients in Fill Beautiful Products.

Keloids/Scarring: I understand that the safety of Fill Beautiful Products in patients with known susceptibility to keloid formation or hypertrophic scarring has not been studied.

5/08/2018

Accidental Injection into a Blood Vessel: I understand that Fill Beautiful Products can be accidentally injected into a blood vessel which may block the blood vessel and cause local tissue damage, tissue necrosis (tissue death), disfigurement, or potentially even blindness, heart attack or stroke.

Radio-opacity: I understand that CaHA - Radiesse is radiopaque and is visible on CT scan and may be visible in X-rays.

Duration of Effect: I understand that the outcome of treatment with Fill Beautiful Products will vary among products and patients. Additional treatments may be necessary to achieve the desired outcome.

Other: This above list is not meant to be inclusive of all possible risks associated with dermal fillers as there are both known and unknown side effects and complications associated with any medications or dermal filler injection procedure. No studies of interactions of Fill Beautiful Products with drugs or other substances or implants have been conducted. The safety of Fill Beautiful Products for use during or in breastfeeding women has not been established. I understand that medical attention may be required to resolve complications associated with my injections and is not the financial responsibility of 5 Star Medical Inc or providers.

After Care: I understand that I should minimize exposure of the treated area to the sun or heat for approximately 24 hours after treatment or until any initial swelling or redness goes away. Also, gentle cleansers and lotions may be used post procedure as skin punctures heal within 24 hours. Do not press or massage the treated areas. I will have the opportunity to discuss the potential risks and benefits of Fill Beautiful Products with staff and providers before and after the treatment and I will inform the staff if I have questions or concerns at anytime. I understand that there is no guarantee of any particular results of any treatment.
